

Arya Emini

Senior Backend Engineer & Systems Reliability Specialist

Istanbul, Turkey | arya@aryaemini.com | +90 (533) 644 47 13

github.com/aemini

PROFESSIONAL SUMMARY

20+ years of end-to-end engineering experience with 8+ years of professional Java/Spring Boot expertise. Specialized in architecting high-availability fintech infrastructures and performance-critical distributed systems. Proven track record in bridging the gap between application logic and production stability. Expert in **PCI DSS regulated environments**, database partitioning, and asynchronous messaging patterns. Focused on delivering scalable, secure, and maintainable software that minimizes technical debt and operational risk.

TECHNICAL COMPETENCIES

- **Fintech & Security:** Expert in designing systems under **PCI DSS / TCMB compliance**. Skilled in aggressive network segmentation, granular access control, and comprehensive audit logging to ensure traceability in high-stakes financial environments.
- **Scalability & Performance:** Experienced in diagnosing and resolving traffic spikes through database partitioning, asynchronous processing, and strategic caching. Adept at analyzing trade-offs between architectural choices to optimize system performance.
- **Infrastructure-Aware Development:** Deep understanding of the application-infrastructure lifecycle. Bridges the gap between clean code and production performance by developing software with a "production-first" mindset, ensuring operational reliability and resource efficiency.
- **Disaster Recovery & Data Integrity:** Expert in architecting geo-redundant systems. Proven experience in maintaining zero-data-loss policies through synchronous replication across data centers, balancing latency requirements with critical financial data integrity.

TECHNICAL STACK

- **Languages:** Java (Spring Boot), PHP.
- **Infrastructure:** Kubernetes, Docker Swarm, Linux (Debian/RedHat), VMware ESXi, CI/CD.
- **Databases:** PostgreSQL, MySQL, Percona XtraDB Cluster.
- **Observability:** Zabbix, Graylog, OSSEC.
- **Networking:** Fortigate, VLAN segmentation, IPSec.

PROFESSIONAL EXPERIENCE

- **SmartIQ Teknoloji A.Ş.** | Software Developer (Java) | 2023 – 2025
Developed backend services for vehicle valuation and financial platforms, implementing credit eligibility checks and financial automation using SOLID principles.
- **IO Intelligence** | Software Developer (Java) | 2022 – 2023
Built backend components for vehicle telematics platforms, parsing high-throughput telemetry data streams (TCP/UDP).
- **Ödeal Teknoloji A.Ş.** | Software Developer / Infrastructure Admin | 2019 – 2022
Managed production infrastructure under PCI DSS/TCMB regulations, administering Docker Swarm clusters and Percona XtraDB clusters, and implementing centralized logging/monitoring stacks (Graylog/Zabbix).
- **Sigma Telecom LLC** | Software Developer (Java) | 2016 – 2018
Developed backend tools for telecom billing workflows and CDR processing.
- **Invio** | Product and Service Management | 2014 – 2016
Managed AWS-based testing environments and service quality for major telecom operators.
- **Boyabat Elektrik Üretim A.Ş.** | IT Infrastructure | 2008 – 2011
Established and managed complete IT infrastructure for a hydroelectric power plant.

INDEPENDENT PROJECTS & OPEN SOURCE

- **E-commerce Platform:** Built using Spring Boot, PostgreSQL and Angular with multiple bank payment integrations (Asseco, Iyzico, Garanti).
- **Community Platforms:** Developed a 100,000+ user platform focusing on security and real-world scalability.
- **Open Source:** Contributor to Maven Central with libraries for financial data parsing.
